

# The Performance Analysis Infrastructure for the Cray XT3

**Luiz DeRose**

**Programming Environment Technology Lead**

**[ldr@cray.com](mailto:ldr@cray.com)**

# The Cray Tools Strategy

- Must be **easy to use**
- **Integrated** performance tools solution
- Strategy based on the three main steps normally used for application optimization and tuning:
  - Debug application
    - Nobody really cares how fast the program can compute the wrong answer
  - Single processor optimization
    - Make the common case fast
      - **Profile** based on runtime summarization
  - Parallel processing and I/O optimization
    - Communication / barriers / etc.
      - **Profile and trace** based visualization tools
- Close interaction with application developers for feedback, targeting functionality enhancements

# Cray Performance Analysis Infrastructure

- CrayPat
  - **pat\_hwpc**
    - Utility for whole program performance measurement
  - **pat\_build**
    - Utility that instruments the application
      - Based on binary rewrite
      - No source code modification required
  - **CrayPat run-time library** (transparent to the user)
    - API for performance collection at finer granularity
    - Collects performance data during execution
    - Writes performance file
  - **pat\_report**
    - Utility to create a text report or a performance visualization file
  - **pat\_help**
- Cray Apprentice<sup>2</sup>
  - Graphical performance analysis and visualization tool

# Single Processor Optimization

- Answer the following questions:
  - Do I have a performance problem at all?
    - Time / Resource / Hardware Counters measurement
    - Provides overall view of the program execution
      - **pat\_hwpc** a.out
  - Where are the main bottlenecks?
    - Profilers (Flat, Call graph, Function)
      - **CrayPat profile** with runtime summarization
  - Why is it there?
    - HW counters based Instrumentation library
      - **CrayPat profile** with runtime summarization
      - Automatic or hand instrumentation for fine grain measurements

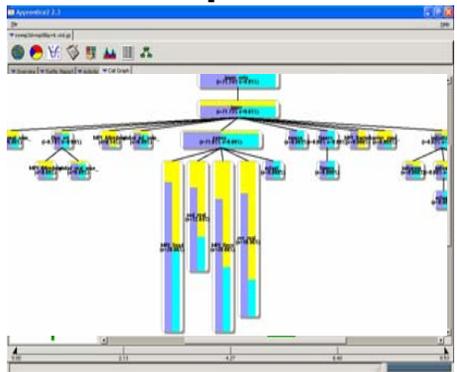

# Parallel Processing Optimization

- Answer the following questions:
  - **Do I have** communication/synchronization problems?
    - Communication profiler
    - Load balance profile
      - CrayPat
  - **Why?**
    - Tracing
      - CrayPat tracing library
    - Cray PAT Visualization GUI
      - Cray Apprentice<sup>2</sup>

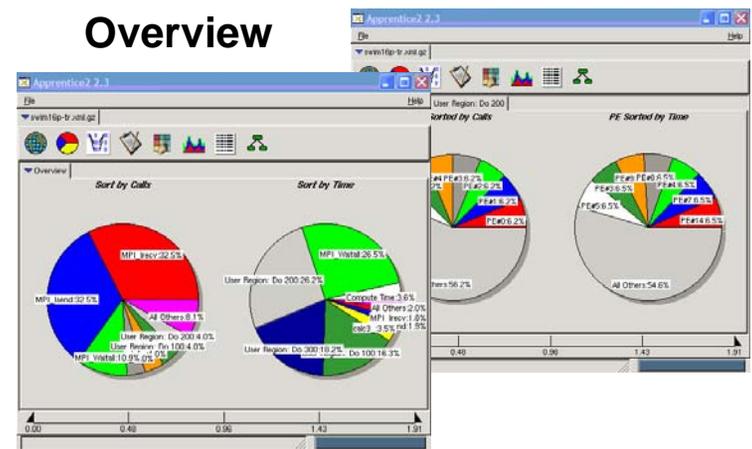

# Cray Apprentice2

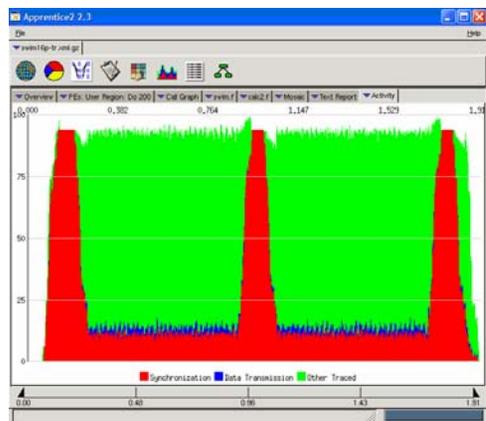

### Call Graph Profile

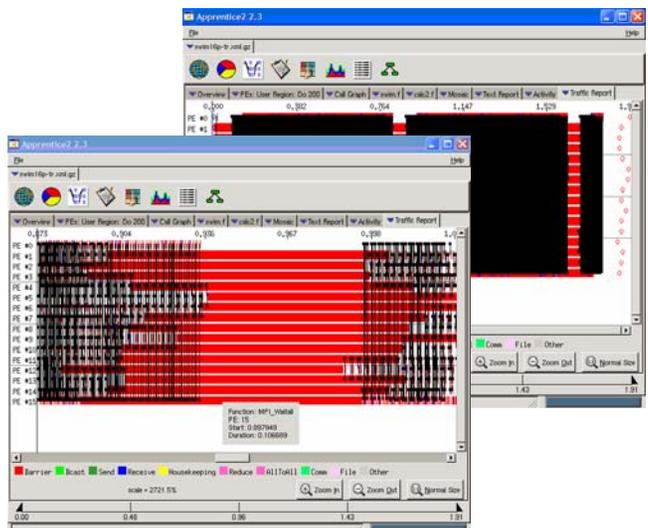

### Communication Overview

### Communication Activity View

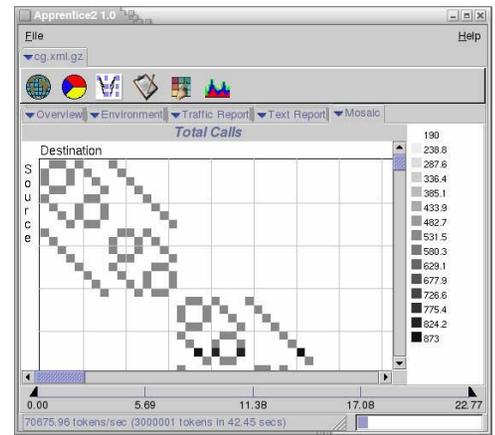

### Time Line View

### Source code mapping

```
165 c angle pipelining loop (batches of mm1 angles)
166
167 DO m0 = 1, nmo
168   m1a = (m0-1)*mm1
169
170   c k<-inflows (k=40 boundary)
171   c
172   if (k2.lt.0.or.kbc.eq.0) then
173     do m1 = 1, mm1
174       do j = 1, jt
175         do i = 1, it
176           phikb(i,j,m) = 0.0d+0
177         end do
178       end do
179     end do
180   else
181     if (do_dsa) then
182       leak = 0.0
183       k = k0 - k2
184       do m1 = 1, mm1
185         m = m1 + m1a
186         do j = 1, jt
187           do i = 1, it
188             phikb(i,j,m) = phikb(i,j,m)
189             leak = leak
190             + wts1(m)*phikb(i,j,m)*di(1)*dj(j)
191             + wts2(j,k+k2,2) + fact2(1,j,k+k2,2)
192             + wts3(m)*phikb(i,j,m)
193           end do
194         end do
195       end do
196       leakage(S) = leakage(S) + leak
197     end do
```

### Pair-wise Communication View

# Conclusions

- Cray performance tools infrastructure was designed to address all steps of the performance tuning process
- Close user interaction provides essential feedback for development of a practical performance tools infrastructure and for functionality enhancements
