

# **HPC Best Practices: Multi-agency Perspectives on Making Production Computing Successful**

David Skinner, Terri Quinn, Bill Kramer, and many more

The Best Practices workshop series has delivered three reports so far. The series is organized by DOE Office of Science as a community effort and conducted with the inclusion of a broad range of inter-agency HPC centers and stakeholders. Topics of Systems Integration, Risk Management, and Software Lifecycles have been addressed so far and a fourth report is expected later this year on Energy Efficiency. This poster presents results from those workshop reports and provides a community consensus of inter-agency HPC facilities managers and directors.
