

Thomas Lippert

Prof. Dr. Dr. Thomas Lippert is the Director of the Institute for Advanced Simulation (IAS) at Forschungszentrum Jülich, Germany. He is the head of the Jülich Supercomputing Centre (JSC), a division of the IAS.

He is managing director of the John von Neumann-Institut für Computing (NIC), a virtual institute of the partner centres DESY (Deutsches Elektronensynchrotron, Hamburg), FZJ and GSI (Gesellschaft für Schwerionenforschung, Darmstadt) in the Helmholtz

Association. He holds the chair for *Computational Theoretical Physics* at the Bergische Universität Wuppertal, Germany.

Thomas Lippert received his diploma in the field of *Theoretical Physics* in 1987 from the University of Würzburg, Germany. He completed a Ph.D. thesis in *Computational Physics* at Wuppertal University in 1993 and a Ph.D. thesis in *Computer Science* at Groningen University, The Netherlands.

The research interests of Thomas Lippert cover the field of computational particle physics, in particular quantum chromodynamics, fast parallel and numerical algorithms and cluster computing. Furthermore, he works in the field of quantum information theory. Thomas Lippert has published about 200 scientific articles.
